Logré cargar ambas tablas sin problema.

- Muestra las principales características del esquema creado y explica las diferentes tablas y variables que existen

El esquema creado se compone de dos tablas, la tabla **company** que se compone de 6 columnas y 100 filas, donde cada fila corresponde a una empresa diferente. Esta tabla cuenta con el **id** de cada empresa como el primary key (PK), es decir, que cada fila corresponde a una compañía diferente. Las variables presentes en esta tabla son descriptivas, excepto el **id** y el teléfono, que son numéricos; sin embargo, se toman como str, pues no tiene sentido operar con **id** o número de teléfono.

Por su parte, la tabla **transaction** se compone de 9 columnas y 100.000 filas, donde cada fila corresponde a una transacción realizada, por ende, el **id** de cada transacción hace la función de clave y en este caso funciona como PK de esta tabla. En esta tabla se encuentran variables tanto alfanuméricas como numéricas; sin embargo, no dejan de ser descriptivas, como los **id**, o la latitud y longitud. También se encuentran dos variables interesantes: **timestamp**, que se compone de fecha y hora, y el **amount**, que es numérica y a simple vista, tiene sentido operar con esta más adelante.

Este es un modelo relacional y la relación que se genera entre estas dos tablas es una relación N:1, es decir, una compañía puede realizar muchas transacciones; sin embargo, una transacción corresponde a una sola compañía. Esta relación se establece a través de PK de la **company** (**id**) y como foreign key (FK), el **company\_id** en la tabla **transaction**.

## Ejercicio 2:

Utilizando JOIN realizarás las siguientes consultas:

- Listado de los países que están generando ventas.

```

5 #Listado de los países que están generando ventas:
6 • SELECT distinct (country)
7 FROM company as c
8 JOIN transaction as t
9 ON c.id =t.company_id;

```

Result Grid | Filter Rows: | Export: | Wrap Cell Content: [IA](#)

### Ejercicio 3:

En tu empresa, se plantea un nuevo proyecto para lanzar algunas campañas publicitarias para hacer competencia a la compañía “Non Institute”. Para ello, te piden la lista de todas las transacciones realizadas por empresas que están ubicadas en el mismo país que esta compañía.

- Muestra el listado aplicando JOIN y subconsultas.

```
123  #main query
124  •  SELECT t.id as transaccion, c.company_name as nombre_compañia, c.country as pais
125  FROM company as c
126  JOIN transaction as t
127  ON c.id = t.company_id
128  WHERE c.country = (SELECT c.country
129                      FROM company as c
130                      WHERE c.company_name = "Non Institute")
131  ;
```
